

## Iteration Plan for Week 1

Our plan for the first week is to develop GUIs for creating account/log-in and the tracker.

In Creating account GUI, users are asked to submit a username, a password and an e-mail address. If username or e-mail is already taken, a warning will popup and bring the user back to the form. After a new user profile is created, the user will be redirected to a window where the user's name and e-mail address is shown. Then(Or if the user skips creation) username/password is asked for logging in.

In activity tracker GUI, there will be buttons for editing profile, access to friend's list(where friends' activity is shown) and updating stats.
